

EVOCHARGE® Retractor – Electric Vehicle Cable Management System

Model Number: EVC0201

Installation Guide

Revision A

IMPORTANT SAFETY INSTRUCTIONS

This document contains instructions and warnings that must be followed when installing and using the Electric Vehicle Supply Equipment (EVSE). Before installing or using the EVSE, read this entire document as well as WARNING and CAUTION markings in this document.

1 Unpacking

1.1 Unpacking

Unpackage all items and confirm the contents as noted below.

Item	Description	Qty.	Notes
1	Retractor with Mounting Bracket	1	
2	Cable Clamp Package Kit	1	Includes one (1) Cable Clamp, four (4) #5 Phillips screws 5/8" long, one (1) 10-32 x 1 1/4" long screw, and one (1) 10-32 nut.

2 Installation

2.1 Installation Planning

WARNING: RISK OF ELECTRIC SHOCK

- Do not touch live electrical parts.
- Disconnect the power supply to the charging station and verify no power is present before installing, adjusting, or repairing the cable retractor. Failure to do so may result in physical injury or damage to the power supply system and the charging station.

The retractor must be installed only by a licensed contractor or electrician in accordance with the provisions of the local electrical industry and building construction and should comply with national building and electrical codes and standards.

Before installing, make sure you have read these instructions in this manual and fully understand its contents. Appropriate protection is required when connecting to a main panel/switchboard. The tools and parts used as outlined in the section "Tools & parts required for installation".

Note: For Wall Mount

Prior to mounting, determine location of an acceptable mounting support. All charging station and cable management products must be anchored into a mounting support such as a 2" x 4" stud or a solid concrete wall, using mounting hardware that is appropriate for the surface on which you are mounting. DO NOT mount this unit directly to a

stucco/drywall/wall board. If installing to a wood stud, use the appropriate lag screws, minimum 2-1/2" in length, and ensure the mounting plate holes are positioned on the centerline of the stud. If mounting onto a concrete, block, or brick wall, use an appropriate anchor for the type of wall on which you are installing the unit. Tools & Parts Required for Installation.

Table 2-1 Tools & parts required for installation

Tool	Size	Source of Supply	Remark
Mounting Fasteners x2	3/8" dia. min. 2-1/2" length	Commercially Available	For installing the Mounting Bracket & Holder to the wall/structure
Phillips Screwdriver	PH3	Commercially Available	For Installation of the cable clamp
Flat Screwdriver	1/4" Slotted	Commercially Available	For Installation of the cable clamp
Wrench or Socket	9/16" or other	Commercially Available	Size required depends on type of lag screws used for mounting retractor to wall stud or other structure

2.2 Install the Retractor

1. To begin the installation, install the retractor to the wall, pedestal, or mounting structure. To allow for the maximum amount of usable cable length, mount the retractor above and as close as possible to the charging station while still allowing the cable to be suspended from the ground when fully retracted.
2. The mounting bracket is supplied installed to the retractor and includes (2) mounting holes (top and bottom of retractor) as shown in Figure 2-1. Use the mounting holes as a template to determine locations to install appropriate mounting fasteners to the structure the retractor is being installed to.

Figure 2-1 Mounting Bracket Screw Hole Locations (2)

3. **Caution:** Prior to mounting, determine a location with acceptable mounting structural support to mount the structure. All charging station and cable management products must be anchored into a mounting structure that is approved by local codes and requirements using mounting hardware that is appropriate for the surface on which you are mounting. Please consult with a local building engineer and inspector to determine mounting

structure requirements. It is the responsibility of the Installer and/or Product Owner to ensure and confirm that the installation and anchoring of the Product are in full compliance with all Building Code Requirements required of the location of install. Failure to mount in a structural support could result in minor or moderate injury.

4. Next, install the cable sleeve/clamp around the cable and secure it with the 4 screws provided as shown in Figure 2-2. Note: before tightening slide cable sleeve to the desired section of the cable. The desired location depends on the length of the cable and mounting height of the retractor so you may need test fit to determine the desired length.

Figure 2-2 Cable Clamp installation

Notice: the retractor is supplied standard with the clamp shown on the left above for use with cable diameters up to 0.850". The clamp shown on the right is for larger cable sizes and can be ordered directly from EVOCHARGE

5. Next, Install the Cable Clamp to the Retractor as shown below in Figure 2-3 and tighten the fastening screw. The installation is now complete. Reference Figure 2-4 below for an example of installed product.

Figure 2-3 Installation of the Cable Clamp to the Retractor

Figure 2-4 Example of wall mount installed product

Figure 2.5 Example of installation on a pedestal can be a single station or dual station mount
